Neurology

Total points 9/32

Glasgow Coma score (GCS) is made up of 3 component parts and these are:

0/1

Eye opening response/motor response/verbal response Eye opening response/verbal response/pupil reaction to light

Eye opening response/motor response/pupil reaction to light

Eye opening response/limb power/verbal response

Correct answer

Eye opening response/motor response/verbal response

In the NEWS observation system, what is ACVUP?

0/1

A replacement for GCS

An assessment for confusion

Assessment for the level of consciousness

Correct answer

Assessment for the level of consciousness

A patient got admitted to hospital with a head injury. Within 15 minutes, GCS was assessed and it was found to be 15. After initial assessment, a nurse should monitor neurological status every:

0/1

15 minutes

30 minutes

45 minutes

60 minutes

Correct answer

30 minutes

Approximately how long is the spinal cord in an adult?

1/1

30 cm

45 cm

60 cm

Flat on bed

Which is not an indication for lumbar tap?

1/1

For patients with increased ICP

For diagnostic purposes
Introduction of spinal anaesthesia for surgery
Introduction of contrast medium

It is unsafe for a spinal tap to be undertaken if the patient:

1/1

Bacterial meningitis
Papilloedema
Intracranial mass is suspected
Site skin infection
All the above

After lumbar puncture, the patient experienced shock. What is the etiology behind it?

0/1

Increased ICP

Speech and language therapist

Mrs Jones has had a cerebral vascular accident, so her left leg is increased in tone, very stiff and difficult to position comfortably when she is in bed. What would you do? 0/1

- Give Mrs Jones analgesia and suggest she sleeps in the chair
- Try to diminish increased tone by avoiding extra stimulation by ensuring her foot doesn't come into contact with the end of the bed; supporting, with a pillow, her left leg in side lying and keeping the knee flexed
- Give Mrs Jones diazepam and tilt the bed
- Suggest a warm bath before she lies on the bed Then use pillows to support the stiff limb

Correct answer

Try to diminish increased tone by avoiding extra stimulation by ensuring her foot doesn't come into contact

English is not their first language with existing other mental disorder such as dementia
Being inpatient for a long time with or without family and means of gauging the time of the day

Correct answer

Being inpatient for a long time with or without family and means of gauging the time of the day

Patient's husband died. The brother of the patient saw that she was upset but mentally and physically well. After a few weeks, the patient called her brother and said that her husband died yesterday, she verbalized "I didn't know he was sick". She also told her brother that she has been seeing mice and rats in the house. The patient had difficulty sleeping, had incontinence and pain in urinating. A community nurse visited the patient. She observed that the patient is reclusive, passive but pleasant. What could be the problem?

1/1

Delirium due to UTI

Uncoping ability because her husband just died

OET | IELTS | UKVI | GERMAN | STUDY ABROAD

Onset of Alzheimer's disease from dementia Delayed bereavement due to dementia

An 83-year old lady just lost her husband. Her brother visited the lady in her house. He observed that the lady is acting okay but it is obvious that she is depressed. Three weeks after the husband's death, the lady called her brother crying and was saying that her husband just died. She even said, "I cant even remember him saying he was sick." When the brother visited the lady, she was observed to be well physically but was irritable and claims to have frequent urination at night and she verbalizes that she can see lots of rats in their kitchen. Based on the manifestations, as a nurse, what will you consider as a diagnosis to this patient?

0/1

Urinary tract infection leading to delirium Delayed grieving with dementia

Correct answer

Urinary tract infection leading to delirium

Speech and Language Therapist

Positioning and active movement are key in managing the influence of altered tone and abnormal patterns of movement in the recovery of motor control in patients with neurological problems. All of the following are the general principles of care with complex neurological impairments, except:

0/1

- Positioning is suggested as a strategy to prevent pain and to prevent loss of range of movement for patients with low tone particularly around the shoulder
- Patients with little limb function secondary to soft tissue changes and contractures are at increased risk of hypotonia
- Adaptation of the mechanical properties of muscle also contributes to increased tone in patients with hypertonia
- For those with acute and long-standing neurological issues, principles of moving can be applied at any time along their treatment trajectory from
